

NAME: \_\_\_\_\_

# LIFE CYCLE OF A CHICKEN

Adults produce offspring. For chickens, like all birds, the HEN and ROOSTER mate so that the hen can lay FERTILE EGGS. The hen then sits on the eggs to INCUBATE them or the eggs can be placed into a mechanical incubator for artificial incubation. During INCUBATION, the chick EMBRYO in the egg develops. After 21 days of incubation, the chicks HATCH out. These chicks will grow into adults and the LIFE CYCLE will continue.

*Instructions: Place the correct letters in the appropriate boxes*
